

BIG JAVA

Feature Table

	▶ Common Errors	▶ Quality Tips	▶ Productivity Hints	▶ Advanced Topics	▶ Random Facts	▶ HOWTO
1 Introduction	Omitting Semicolons 22 Misspelling Words 25		Backup Copies 16	Alternative Comment Syntax 22 Escape Sequences 23	The ENIAC and the Dawn of Computing 6	
2 An Introduction to Objects and Classes	Forgetting to Initialize Variables 41 Trying to Reset an Object by Calling a Constructor 62 Forgetting to Initialize Object References in a Constructor 67 Trying to Call a Method Without an Implicit Parameter 68		Using the Command Line Effectively 46 The javadoc Utility 56 Keyboard Shortcuts for Mouse Operations 57	Importing Classes 41 Overloading 53 Calling One Constructor from Another 69	Mainframes—When Dinosaurs Ruled the Earth 70	Designing and Implementing a Class 62
3 Fundamental Data Types	Integer Division 94 Unbalanced Parentheses 96 Roundoff Errors 104	Choose Descriptive Variable Names 80 Do Not Use Magic Numbers 92 White Space 97 Factor Out Common Code 98	Avoid Unstable Layout On-Line Help 87 Reading Exception Reports 112	Numeric Ranges and Precisions 81 Other Number Types 82 Combining Assignment and Arithmetic 86 Binary Numbers 105 Formatting Numbers 109 Reading Console Input 113	The Pentium Floating-Point Bug 83 International Alphabets 116	Carrying Out Computations 101
4 Applets and Graphics		Calculate Sample Data Manually 171	Choose Convenient Units for Drawing 178	The Java Runtime Environment and Java Plug-ins 144 Accurate Positioning of Text 150 Applet Parameters 166 Let the Graphics Context Transform the Coordinates 176	The Evolution of the Internet 139 Computer Graphics 162	Drawing Graphical Shapes 157
5 Decisions	Using == to Compare Strings 194 The Dangling else Problem 208 Multiple Relational Operators 213 Confusing && and Conditions 213	Brace Layout 189 Avoid Conditions with Side Effects 196 Prepare Test Cases Ahead of Time 207	Indentation and Tabs 190 Copy and Paste in the Editor 200 Make a Schedule and Make Time for Unexpected Problems 207	The Selection Operator 189 The switch Statement 199 Lazy Evaluation of Boolean Operators 214	Minicomputers and Workstations 201 Artificial Intelligence 216

6 Iteration	Infinite Loops	231	Use for Loops for Their Intended Purpose	240	Redirection of Input and Output	253	do Loops	233	Spaghetti Code	234	Implementing Loops	257
	Off-by-1 Errors	232	Only	240			Scope of Variables Defined in a for Loop Header	241	Correctness Proofs	269		
	Forgetting a Semicolon	242	Don't Use != to Test the End of a Range	243			String Buffers	246				
	A Semicolon Too Many	242	Symmetric and Asymmetric Bounds	256			The "Loop and a Half" Problem	242				
			Count Iterations	256			The break and continue Statements	250				
							Reading Data from the Console	252				
7 Designing Classes	Trying to Modify Primitive Type Parameters	289	Consistency	286	Global Search and Replace	308	Call by Value and Call by Reference	290	The Explosive Growth of Personal Computers	317	Programming with Packages	282
	Shadowing	307	Minimize Side Effects	289	Regular Expressions	308	Class Invariants	296				
	Confusing Dots	313	Don't Change the Contents of Parameter Variables	292			Alternative Forms of Field Initializations	303				
			Do Not Abuse Static Fields	302			Calling One Constructor from Another	309				
8 Testing and Debugging					Batch Files and Shell Scripts	341			The First Bug	353	Debugging	354
									The Therac-25 Incidents	356		
9 Interfaces and Polymorphism	Forgetting to Define Implementing Methods as Public	369					Constants in Interfaces	372	Operating Systems	386		
	Modifying the Signature in the Implementing Method	386					Anonymous Inner Classes	380				
10 Event Handling	Forgetting to Repaint	403			Share Listener Classes, Not Listener Objects	413	Event Adapters	403	Programming Languages	423	Handling Mouse and Action Events	414
	Forgetting to Attach a Listener	412			Don't Use a Container as a Listener	413						
					Code Reuse	422						
11 Inheritance	Confusing Super- and Subclasses	433	Clone Mutable Instance Fields in Accessor Methods	461	Supply toString in All Classes	456	Abstract Classes	449	Scripting Languages	465		
	Shadowing Instance Fields	440					Final Methods and Classes	450				
	Failing to Invoke the Superclass Method	441					Protected Access	453				
	Accidental Package Access	452					Inheritance and the toString Method	457				
	Making Inherited Methods Less Accessible	453					Inheritance and the equals Method	459				
	Forgetting to Clone	461					Inheritance and the clone Method	462

[▶ HOWTO](#)

12	Graphical User Interfaces	Overriding the paint Method of a Panel 479			Adding the main Method to the Frame Class 488	Visual Programming 513	Layout Management 498
		Forgetting to Call the paintComponent Method of the Superclass 480			Converting a Frame to an Applet 489		
13	Array Lists and Arrays	Bounds Errors 525	Make Parallel Arrays into Arrays of Objects 543		Array Initialization 533	An Early Internet Worm 542	
		Inserting Objects of the Wrong Type into an Array List 525			Two-Dimensional Arrays with Variable Row Lengths 547		
		Uninitialized Arrays 533					
		Length and Size 533					
		Underestimating the Size of a Data Set 541					
14	Exception Handling		Throw Exceptions Only in Exceptional Cases 561			The Ariane Rocket Incident 576	
			Do Not Squelch Exceptions 567				
15	Streams	Backslashes in File Names 584	Use Object Streams 598	Serializing Geometric Objects 598	Encryption Algorithms 590	Using Files and Streams 605	
		Negative byte Values 584					
16	System Design			Attributes and Methods in UML Diagrams 626	Programmer Productivity 620	CRC Cards and UML Diagrams 628	
				Association, Aggregation, and Composition 627	Computing—Art or Science? 659		
17	Recursion	Infinite Recursion 671				The Limits of Computation 694	
		Tracing through Recursive Methods 676					
18	Sorting and Searching				The Quicksort Algorithm 720	The First Programmer 718	
19	An Introduction to Data Structures				Static Inner Classes 753	Standardization 760	
20	Advanced Data Structures	Forgetting to Define hashCode 787	Use Interface References to Manipulate Data Structures 772		Priority Queues 800	Software Piracy 801	Choosing a Container 802
21	Multithreading	Calling the run Method of a Thread 814	Check for Thread Interruptions in the run Method of a Thread 817		The Runnable Interface 814	Embedded Systems 844	
		Calling wait without Calling notifyAll 831			Thread Priorities 815		
		Calling notifyAll without Locking the Object 831			Thread Groups 818		
					Complex Deadlocks 831

[▶ HOWTO](#)

22	Internet Networking			Use High-Level Libraries	879			The OSI Model	854	Designing Client/Server Programs	869																
23	Relational Databases	Joining Tables without Specifying a Link Condition	900	Don't Hardwire Database Connection Parameters into Your Program	910	Stick with the Standard	888	Avoid Unnecessary Data Replication	891	Don't Replicate Columns in a Table	893	Let the Database Do the Work	913	Databases and Privacy	901												
24	XML	XML Elements Describe Instance Fields, Not Classes	965	You Cannot Read an XML Document with an External DTD from a Stream	994	Prefer XML Elements over Attributes	949	Avoid Children with Mixed Elements and Text	950	Use DTDs with Your XML Files	993	The XML Schema Specification	986	Other XML Technologies	995	Word Processing and Typesetting Systems	945	Grammars, Parsers, and Compilers	966	Designing an XML Document Format	951	Writing a Parser for an XML Document Type	962	Writing an XML Document	975	Writing a DTD	983
25	JavaServer Pages and Servlets	Fussy JSP Syntax	1010	Mismatch between Form and Parameter Names	1021	Instance Variables in Servlets	1053	Minimize the Java Code in JSP	1011	Use Relative URLs	1021	Inspecting the Servlet Code	1055	Session State	1031	Cataloging Your Necktie Collection	1056	Designing a Bean	1013	Building a Web Application	1037
