

Alphabetical List of Syntax Boxes

Array Construction	282
Array Element Access	283
Assertion	337
Assignment	37
Block Statement	193
Calling a Superclass Constructor	481
Calling a Superclass Method	479
Cast	106
Class Definition	73
Constant Definition	112
Constructor Definition	72
Defining a Generic Class	846
Defining a Generic Method	853
Defining an Enumerated Type	213
Defining an Interface	414
Exception Specification	557
finally Clause	562
General try Block	559
Implementing an Interface	414
Importing a Class from a Package	48
Inheritance	471
Inner Classes	425
Instance Field Declaration	78
Instantiating a Generic Class	843
Method Call	21
Method Definition	71
Object Construction	45
Package Specification	352
Static Method Call	124
The “for each” Loop	293
The for Statement	241
The if Statement	192
The instanceof Operator	484
The return Statement	81
The while Statement	236
Throwing an Exception	555
Variable Definition	35

Chapter	 Common Errors	 How Tos	 Quality Tips
1 Introduction	Omitting Semicolons 22 Misspelling Words 24		
2 Using Objects	Trying to Invoke a Constructor Like a Method 46		
3 Implementing Classes	Forgetting to Initialize Object References in a Constructor 90 Trying to Call a Method Without an Implicit Parameter 93	Designing and Implementing a Class 85	
4 Fundamental Data Types	Integer Division 121 Unbalanced Parentheses 122 Roundoff Errors 125	Carrying Out Computations 125	Do Not Use Magic Numbers 115 Choose Descriptive Variable Names 115 White Space 122 Factor Out Common Code 123
5 Programming Graphics (Optional)		Drawing Graphical Shapes 170	Calculate Sample Data Manually 183
6 Decisions	Using == to Compare Strings 198 The Dangling else Problem 210 Multiple Relational Operators 216 Confusing && and Conditions 217		Brace Layout 193 Avoid Conditions with Side Effects 201 Prepare Test Cases Ahead of Time 211
7 Iteration	Infinite Loops 236 Off-by-One Errors 237 Forgetting a Semicolon 246 A Semicolon Too Many 246	Implementing Loops 254	Use for Loops for Their Intended Purpose 245 Don't Use != to Test the End of a Range 247 Symmetric and Asymmetric Bounds 256 Count Iterations 256

 Productivity Hints		 Advanced Topics		 Random Facts	
Understand the File System	15	Alternative Comment Syntax	20	The ENIAC and the Dawn of Computing	7
Have a Backup Strategy	16				
Don't Memorize—Use Online Help	52	Testing Classes in an Interactive Environment	49	Mainframes—When Dinosaurs Ruled the Earth	55
The javadoc Utility	76	Calling One Constructor from Another	93	Electronic Voting Machines	94
Using the Command Line Effectively	88				
Avoid Unstable Layout	117	Big Numbers	107	The Pentium Floating-Point Bug	109
Reading Exception Reports	130	Binary Numbers	107	International Alphabets	133
		Combining Assignment and Arithmetic	118		
		Escape Sequences	131		
		Strings and the char Type	132		
		Formatting Numbers	137		
		Reading Input from a Dialog Box	139		
		Applets	158	The Evolution of the Internet	160
				Computer Graphics	174
Indentation and Tabs	194	The Selection Operator	195	Artificial Intelligence	219
Keyboard Shortcuts for Mouse Operations	203	The swi tch Statement	205		
Copy and Paste in the Editor	204	Enumerated Types	212		
Make a Schedule and Make Time for Unexpected Problems	212	Lazy Evaluation of Boolean Operators	217		
		De Morgan's Law	218		
		do Loops	238	Spaghetti Code	239
		Scope of Variables Defined in a for Loop Header	247	Correctness Proofs	267
		The “Loop and a Half” Problem	257		
		The break and continue Statements	258		
		Loop Invariants	265		

Chapter	 Common Errors	 How Tos	 Quality Tips
8 Arrays and Array Lists	Bounds Errors 283 Uninitialized Arrays 284 Length and Size 289 Underestimating the Size of a Data Set 307	Working with Array Lists and Arrays 301	Prefer Parameterized Array Lists 289 Make Parallel Arrays into Arrays of Objects 307
9 Designing Classes	Trying to Modify Primitive Type Parameters 331 Shadowing 349 Confusing Dots 356	Programming with Packages 356	Consistency 328 Minimize Side Effects 333 Don't Change the Contents of Parameter Variables 333
10 Testing and Debugging		Debugging 398	
11 Interfaces and Polymorphism	Forgetting to Define Implementing Methods as Public 415 Trying to Instantiate an Interface 418 Modifying the Signature in the Implementing Method 430		
12 Event Handling (Optional)	Forgetting to Attach a Listener 450 Forgetting to Repaint 459	Implementing a Graphical User Interface (GUI) 453	
13 Inheritance	Confusing Super- and Subclasses 472 Shadowing Instance Fields 479 Failing to Invoke the Superclass Method 480 Accidental Package Access 493 Making Inherited Methods Less Accessible 493 Defining the equals Method with the Wrong Parameter Type 500 Forgetting to Clone 502		Clone Mutable Instance Fields in Accessor Methods 502

 Productivity Hints	 Advanced Topics	 Random Facts
	Array Initialization 284 Two-Dimensional Arrays with Variable Row Lengths 302 Multidimensional Arrays 302 Partially Filled Arrays 308 Methods with a Variable Number of Parameters 309	An Early Internet Worm 310
Global Search and Replace 350 Regular Expressions 350	Call by Value and Call by Reference 334 Class Invariants 339 Alternative Forms of Field Initialization 345 Static Imports 351	The Explosive Growth of Personal Computers 358
Batch Files and Shell Scripts 385	Reading Test Inputs from a File 379 Unit Testing with JUnit 386	The First Bug 399 The Therac-25 Incidents 400
	Constants in Interfaces 416 Anonymous Classes 426	Operating Systems 433
Don't Use a Container as a Listener 450 Code Reuse 454	Event Adapters 459	Programming Languages 460
Supply toString in All Classes 497	Abstract Classes 490 Final Methods and Classes 491 Protected Access 494 Inheritance and the toString Method 497 Inheritance and the equals Method 500 Implementing the clone Method 503 Enumerated Types Revisited 505	Scripting Languages 506

Chapter	 Common Errors	 How Tos	 Quality Tips
14 Graphical User Interfaces (Optional)			Layout Management 528
15 Exception Handling			Throw Early, Catch Late 560 Do Not Squelch Exceptions 560 Do Not Use catch and finally in the Same try Statement 562 Do Throw Specific Exceptions 564
16 Files and Streams	Backslashes in File Names 578 Negative byte Values 582	Using Files and Streams 597	
17 Object-Oriented Design		CRC Cards and UML Diagrams 619	
18 Recursion	Infinite Recursion 668 Tracing Through Recursive Methods 672	Thinking Recursively 673	
19 Sorting and Searching	The compareTo Method Can Return Any Integer, Not Just -1, 0, and 1 732		
20 An Introduction to Data Structures			
21 Advanced Data Structures	Forgetting to Define hashCode 795	Choosing a Container 813	Use Interface References to Manipulate Data Structures 780
22 Generic Programming	Genericity and Inheritance 854 Writing Code That Does Not Work After Types Are Erased 857 Using Generic Types in a Static Context 858
